A change of phase from liquid to gas that takes place at the surface of a liquid is \_\_\_\_.

### **Chapter 23: Change of Phase Questions Flashcards**

The change in the internal energy of a substance causes the change of phase. If you heat a solid sufficiently, it will melt and become a liquid. If you heat the liquid, it will vaporize and become a gas. Energy must be put into a substance to change its phase from solid to liquid to gas.

### Phase Change Worksheets

The nature of the phase change depends on the direction of the heat transfer. Heat going into a substance changes it from a solid to a liquid or a liquid to a gas. Removing heat from a substance changes a gas to a liquid or a liquid to a solid. Two key points are worth emphasizing.

### Phase Changes - lardbucket

A phase is a distinctive form of a substance, and matter can change among the phases. It may take extreme temperature, pressure or energy, but all matter can be changed.

Lesson 2: Phase Changes. Changing the temperature of a material is not the only process that involves heat. In this section, we'll examine the process of changing phase; first we'll look at heating and cooling curves as a way to express the changes occurring with the addition (or removal) of heat from a material and then we'll do some calculations involving heat and phase changes.

where  $\Phi$  is the total phase shift accumulated over a period of time ( $\Delta t$ ) and  $\omega(t)$  is the frequency shift that may vary as a function of time. The total accumulated phase shift ( $\Phi$ ) can be thought of as the area under a frequency vs time curve. This fact will prove useful when we discuss the phase changes induced by gradients or flow in later ...
