Chapter 13: Electrons in Atoms. These regions of space are where electrons of similar energy travel are called energy levels. There are 7 energy levels and represented by #1-7, with 1 being 1st energy level which is closest to the nucleus, and is the lowest energy, and being furthest from the nucleus and of highest energy.

The color of this light is orange-red, with a frequency of $4.57 \times 10^{14} \text{ s}^{-1}$. Explain the origin of the atomic emission spectrum of an element. Electrons in an atom absorb energy, then lose the energy and emit it as light.

Chapter 13 Electrons in Atoms - Mrs. Morales PEP site

In atoms, electrons and the nucleus interact to make the most stable (lowest energy) arrangement possible. The arrangement of electrons in the orbitals of the atom is called the electron configuration. Ex: $1s^2 2s^2 2p^4$. There are rules that must be followed when filling the orbitals.
