A reference range is a set of values that includes upper and lower limits of a lab test based on a group of otherwise healthy people. The values in between those limits may depend on such factors as age, sex, and specimen type (blood, urine, spinal fluid, etc.) and can also be influenced by circumstantial situations such as fasting and exercise.

Model for Improvement: Plan-Do-Study-Act (PDSA) Cycles Once a team has set an aim, established its membership, and developed measures to determine whether a change leads to an

improvement, the next step is to test a change in the real work setting. The Plan-Do-Study-Act (PDSA) cycle is shorthand for testing a change — by planning it, trying it, observing the results, and acting on what is ...

In short ASMR is not a scientific concept, Autonomous Sensory Meridian Response, might sound like a phrase from a science text book but that isn't where it's origins lie at all (check out our history page for more details). At the moment it really comes down to anecdotal evidence that it even exists, and individual's personal guesses at an explanation.

### **Is there any science behind ASMR? - The ASMR Lab**

A person's spot on the waiting list depends on the patient's medical urgency, blood, tissue and size match with the donor, time on the waiting list and proximity to the donor.
