Biochemical and metabolic interpretation of microbial growth is an important topic in bioreactor design. We intend to address valuable information about the relation of critical operation variables and the simulation of bioprocesses with unstructured and structured kinetic models. Process parameters such as nutrient supply, pH, dissolved oxygen, and metabolic end-products directly impact the ...

Combinatorial optimisation problems typically involve finding the best arrangement, ordering, or selection of objects. There are numerous applications in Operational Research including scheduling of orders on machines in production industries, routing of vehicles to deliver goods to customers, and assigning of personnel such as nurses or airline crew to work periods.

A vector space (also called a linear space) is a collection of objects called vectors, which may be added together and multiplied ("scaled") by numbers, called scalars. Scalars are often taken to be real numbers, but there are also vector spaces with scalar multiplication by complex numbers, rational numbers, or generally any field. The operations of vector addition and scalar multiplication ...

This paper describes a computational approach to edge detection. The success of the approach depends on the definition of a comprehensive set of goals for the computation of edge points. These goals must be precise enough to delimit the desired behavior of the detector while making minimal assumptions about the form of the solution.

La economía matemática es la aplicación de métodos matemáticos para representar teorías y analizar problemas en la economía. Por convención, los métodos aplicados se refieren a aquellos que van más allá de geometría simple, como cálculo diferencial e integral, ecuaciones diferenciales, álgebra de matrices, programación matemática y otros métodos computacionales.
