So we're down to the two cases where $x = 1$ and one of y or z equals 1 and the other equals 0. In this case both sides equal 1. So $x(y + z) = (x + y)z$ in all eight cases. Exercise 6: Prove that if two homogeneous systems of linear equations in two unknowns have the same solutions, then they are equivalent.

Linear Algebra - Greg Grant

Chapter 1 deals with systems of linear equations and their solution by means of elementary row operations on matrices. It has been our practice to spend about six lectures on this material. It provides the student with some picture of the origins of linear algebra and with the computational technique necessary to under
