Is it possible to create an LDAP query which will return (or check for) users in a nested group? e.g. UserA is a member of GroupA, and GroupA is a member of GroupB. I want a query on GroupB to return

active directory - ldap nested group membership - Stack ...

I am looking for a method to log ldap access of a Active Directory domain controller. I want to be able to log the username and source IP address access to both 389, and 636(encrypted).. A simple packet capture would get me the source IP, but getting the username will not be possible over ldaps so I am hoping there is some built-in auditing/debug/logging feature in Windows that will give me ...

logging - Log LDAP access of the Active directory - Server ...

I looked everywhere for a solution to my problem but still didn't find it. I have these two simple files as slapd.conf and mytree.ldif and when i try to add something to mytree.ldif it keeps asking me for a password (which i believe is roopw defined in slapd.conf) but it doesn't work.

configuration files - Enter LDAP Password keeps saying ...

From the Microsoft document titled Active Directory's LDAP Compliance:. Windows Server 2003. Building on the foundation established in Windows 2000 Server, the Active Directory service in Windows Server 2003 extends beyond the baseline of LDAP compliance into one of the most comprehensive directory servers offering a wide range of LDAP support.

active directory - Is my AD already an LDAP server ...

An LDAP client transmits a BIND request to a server in order to change the authorization state of the client connection. When a client first connects to an LDAP directory server, the server sets the authorization state of the connection to unauthenticated. When the server receives a BIND request, the server sets the authorization state of the connection to unauthenticated immediately.

What does binding to a LDAP server mean? - Super User

LDAP (short for Lightweight Directory Access Protocol) is an industry standard, widely used set of protocols for accessing directory services.. A directory service in simple terms is a centralized, network-based database optimized for read access. It stores and provides access to information that must either be shared between applications or is highly distributed.
