In mathematics, and more specifically in linear algebra and functional analysis, the kernel (also known as null space or nullspace) of a linear map  $L : V \rightarrow W$  between two vector spaces  $V$  and  $W$ , is the set of all elements  $v$  of  $V$  for which  $L(v) = 0$ , where  $0$  denotes the zero vector in  $W$ . That is, in set-builder notation,  $\text{ker } L = \{v \in V \mid L(v) = 0\}$ .

This is really about it. A very important point is this: No matter what kind of equation you're dealing with -- linear or otherwise -- whatever you do to the one side, you **MUST** do the exact same thing to the other side! Equations are like little children: You have to be totally, totally fair! You cannot subtract 5 from one side of the equation and forget to do it with another side.
