The augmented matrix represents all the important information in the system of equations, since the names of the variables have been ignored, and the only connection with the variables is the location of their coefficients in the matrix. It is important to realize that the augmented matrix is just that, a matrix, and not a system of equations. In particular, the augmented matrix does not have ...

In mathematics, a linear equation is an equation that may be put in the form $a_1x_1 + a_2x_2 + \dots + a_nx_n = b$, where x_1, x_2, \dots, x_n are the variables (or unknowns or indeterminates), and a_1, a_2, \dots, a_n, b are the coefficients, which are often real numbers. The coefficients may be considered as parameters of the equation, and may be arbitrary expressions, provided they do not contain any of the variables.
