Cetaceans' reproductive organs are located inside the body. Male cetaceans (whales, dolphins, and porpoises) have two slits, the genital groove concealing the penis and one further behind for the anus. Cetaceans have fibroelastic penises, similar to those of Artiodactyla. The tapering tip of the cetacean penis is called the pars intrapraeputialis or terminal cone.

The XY sex-determination system is the sex-determination system found in humans, most other mammals, some insects (), some snakes, and some plants (). In this system, the sex of an individual is determined by a pair of sex chromosomes. Females typically have two of the same kind of sex chromosome (XX), and are called the homogametic sex. Males typically have two different kinds of sex ...

Mechanisms of mate choice evolution. --- Several mechanisms have been put forward to explain mate choice: (i) Direct phenotypic effects. Female preference for a male ornament can evolve as a result of direct phenotypic benefits if the ornament reflects the ability of the male to provide material advantages, such as a high-quality territory, nutrition, parental care or protection.

Kegel Exercises for Men are used to strengthen the PC or pubococcygeus muscle, just as they are for women. The muscle is similar in both men and women, stretching from the pubic bone to the tail bone and forming a hammock-like floor that supports the organs of the pelvis and contributes to the function of the sphincter muscles.
