Procyclical and countercyclical variables are variables that fluctuate in a way that is positively or negatively correlated with fluctuations in gross domestic product (GDP). The scope of the concept may differ between the context of business cycle theory and that of economic policy-making.. The concept is often encountered in the context of a government's approach to spending and taxation.

Imperfect relationship. Okun's law may more accurately be called "Okun's rule of thumb" because it is an approximation based on empirical observation rather than a result derived from theory. Okun's law is approximate because factors other than employment (such as productivity) affect output.

Okun's law - Wikipedia

Okun's law (Okun's law) is an empirical relationship between the rate of change in the unemployment rate and the rate of change in the gross domestic product (GDP). It states that for every 1% point that the unemployment rate falls, the GDP grows by approximately 2.5%.
