Effects of Neonicotinoid Insecticides on Physiology and ...

Non-reproductive sexual behavior consists of sexual activities animals participate in that do not lead to the reproduction of the species. Although procreation continues to be the primary explanation for sexual behavior in animals, recent observations on animal behavior have given alternative reasons for the engagement in sexual activities by animals. ...

Non-reproductive sexual behavior in animals - Wikipedia

Bird anatomy, or the physiological structure of birds' bodies, shows many unique adaptations, mostly aiding flight. Birds have a light skeletal system and light but powerful musculature which, along with circulatory and respiratory systems capable of very high metabolic rates and oxygen supply, permit the bird to fly. The development of a beak has led to evolution of a specially adapted ...

Mice homozygous for the Apoe tm1Unc mutation show a marked increase in total plasma cholesterol levels that are unaffected by age or gender. Fatty streaks in the proximal aorta are found at three months of age. The lesions increase with age and progress to lesions with less lipid but more elongated cells, typical of a more advanced stage of pre-atherosclerotic lesion.

Among the advantages of endothermy is that warm muscles contract faster, increasing speed and agility in colder water. This means, that despite their large size, salmon sharks can accelerate quickly and maintain a high rate of speed over short distances, although they lack endurance of true warm-blooded marine mammals.
