There are two ways that natural and man-made things can use rotation to move around. One way is for the entire thing to roll. The other way is for part of the thing to turn while the rest does not, like a wheel or a propeller. Some living things move around by rolling, but no living things seem to use wheels.

Irreducible complexity (IC) involves the idea that certain biological systems cannot evolve by successive small modifications to pre-existing functional systems through natural selection. Irreducible complexity has become central to the creationist concept of intelligent design, but the scientific community, which regards intelligent design as pseudoscience, rejects the concept of irreducible ...

Most citations of Maslow's hierarchy of needs list only five levels. This is particularly true of management books and hand-outs. Very few sources that I have seen list the full range of seven need levels that Maslow outlines and explains in his 1970 revision to his 1954 book, *Motivation and Personality*.
