The graph is a linear function represented by an equation of the form $f(x) = mx + b$, where m is the rate of change and b is the initial value. First, calculate the rate of change, or slope, between any two points on the graph. In this case, use the points (10, 700) and (30, 850). 14 Next, determine the initial value.

Study Island is hard and annoying to complete. That's why we created IslandAnswers.com to help people like us get answers as fast as possible. We talk and blog about all kinds of cheats and hacks for study island. How To Use These Answers. You can use the study island answer keys to cheat and finish your homework extra fast.

Answers For Study Island: Easy Cheat To Finish Study ...

graph the equations, and find the point of intersection. Start by placing both equations in slope-intercept form. Notice that both equations have the same slope but different y-intercepts. The two lines are parallel and will never intersect. Thus, the system has no solution. 4. Use elimination by addition to solve the system of equations.
