A neuron, also known as a neurone (British spelling) or nerve cell, is an electrically excitable cell that communicates with other cells via specialized connections called synapses. It is the main component of nervous tissue. All animals except sponges and placozoans have neurons, but other multicellular organisms such as plants do not.. Neurons are typically classified into three types based on ...

The central role of RNA makes it the premier readout for a fast and comprehensive description of the physiological state of a cell. Using the so-called RNA-seq technique whereby transcripts are converted to cDNA for next-generation sequencing it is now possible to profile and quantify RNA molecules in any organism [] as well as their interactions with RNA-binding proteins (RBPs) [].
