In mathematics, and more specifically in linear algebra and functional analysis, the kernel (also known as null space or nullspace) of a linear map  $L : V \rightarrow W$  between two vector spaces  $V$  and  $W$ , is the set of all elements  $v$  of  $V$  for which  $L(v) = 0$ , where  $0$  denotes the zero vector in  $W$ . That is, in set-builder notation,  $\text{ker } L = \{v \in V \mid L(v) = 0\}$ .

The divergence of a vector field  $F$ , denoted  $\text{div}(F)$  or  $\text{del} \cdot F$  (the notation used in this work), is defined by a limit of the surface integral  $\text{del} \cdot F = \lim_{V \rightarrow 0} (\oint_S F \cdot da) / V$  (1) where the surface integral gives the value of  $F$  integrated over a closed infinitesimal boundary surface  $S = \partial V$  surrounding a volume element  $V$ , which is taken to size zero using a limiting process.
