1. Introduction. Developmental science is concerned with understanding systematic changes over time and characterizing the underlying dynamics that produce those changes (Ford and Lerner, 1992). Variability in emotion, cognition, behavior and neurobiology over time is thought to reflect maturational processes that unfold as a result of ongoing interactions between people and environmental ...

FORCES . A force is any push or pull that causes an object to move, stop, or change speed or direction.; The greater the force, the greater the change in motion will be. The more massive an object, the less effect a given force will have on the object.; Unless acted on by a force, objects in motion tend to stay in motion and objects at rest remain at rest.

Highlights A systematic review and meta-analysis of prospective longitudinal studies. Bullying perpetration increased the risk of later violence by about two thirds. Bullying victimization increased the risk of later violence by about one-third. High quality bullying prevention programs should be promoted. They could be seen as an indirect form of preventing adult violence.

The history of longitude is a record of the effort, by astronomers, cartographers and navigators over several centuries, to discover a means of determining longitude.. The measurement of longitude is important to both cartography and navigation, in particular to provide safe ocean navigation. Knowledge of both latitude and longitude was required. Finding an accurate and reliable method of ...

Luminiferous aether or ether ("luminiferous", meaning "light-bearing"), was the postulated medium for the propagation of light. It was invoked to explain the ability of the apparently wave-based light to propagate through empty space, something that waves should not be able to do. The assumption of a spatial plenum of luminiferous aether, rather than a spatial vacuum, provided the theoretical ...
