Abiogenesis, or informally the origin of life, is the natural process by which life has arisen from non-living matter, such as simple organic compounds. While the details of this process are still unknown, the prevailing scientific hypothesis is that the transition from non-living to living entities was not a single event, but a gradual process of increasing complexity that involved molecular ...

What's going on here? Originally, the tar command was intended for use with magnetic tape devices. Since it only made sense to execute tar on one device at a time, the syntax was designed to assume one and only one device. The first file or directory passed was assumed to be the device that held the archive in question and any other files or directories where the contents of the archive to be ...
