Chemistry is the natural science involved with elements and compounds composed of atoms, molecules and ions: their composition, structure, properties, behavior and the changes they undergo during a reaction with other substances.. In the scope of its subject, chemistry occupies an intermediate position between physics and biology. It is sometimes called the central science because it provides ...

In organic chemistry, a homologous series is a series of compounds with the same functional group and similar chemical properties in which the members of the series differ by the number of repeating units they contain. This can be the length of a carbon chain, for example in the straight-chained alkanes (paraffins), or it could be the number of monomers in a homopolymer such as amylose.

Natural Acidity of Rainwater. Pure water has a pH of 7.0 (neutral); however, natural, unpolluted rainwater actually has a pH of about 5.6 (acidic).[Recall from Experiment 1 that pH is a measure of the hydrogen ion ( $H^+$ ) concentration.]The acidity of rainwater comes from the natural presence of three substances ( $CO_2$ ,  $NO$ , and  $SO_2$ ) found in the troposphere (the lowest layer of the atmosphere).

Hydrogen peroxide can decompose spontaneously into water and oxygen. It usually acts as an oxidizing agent, but there are many reactions where it acts as a reducing agent, releasing oxygen as a by-product.. It also readily forms both inorganic and organic peroxides.

### Schwache Basen - Wikipedia

Schwache Basen bezeichnen in der Chemie eine Untergruppe der Basen. Sie liegen in wässrigen Lösungen nur teilweise ionisiert vor. Somit sind sie schwache Elektrolyten. Die Basenstärke bezieht sich immer auf die wässrigen Lösungen der Base, nicht auf die Reinstoffe.

V tuhém PbCl<sub>2</sub> je každý iont olova koordinován s 9 chloridovými ionty. Šest z nich leží ve vrcholech trojúhelníkového hranolu a zbývající tři na bocích tohoto hranolu. Chloridové ionty nemají od centrálního atomu olova stejnou vzdálenost, sedm jich leží ve vzdálenosti 280–309 pm a dva 370 pm daleko. PbCl<sub>2</sub> tvoří bílé ortorombické jehličky.

1.. Introduction As "miners" of the Earth's crust (Epstein, 1972), plants absorb numerous elements from soil. Some of the absorbed elements are referred to as essentials because they are required for plants to complete their life cycle (Arnon and Stout, 1939). Certain essential transition elements such as iron, manganese, molybdenum, copper, zinc, and nickel are known as micronutrients ...

Robert Hooke, Ole Borch, Mikhail Lomonosov și Pierre Bayen au produs oxigen în urma experimentelor în timpul secolelor XVII și XVIII, dar niciunul nu l-a recunoscut ca fiind un element chimic. Aceasta a fost în parte din cauza răspândirii unei filozofii a combustiei și coroziunii denumită teoria flogisticului, teorie care era explicația favorită pentru aceste procese.

INTRODUCTION. Some anthropologists and social psychologists maintain that love is a cultural universal. They believe that at least one variety of love, romantic love, is likely to have appeared in all human groups at all times in human history (see Hatfield & Rapson 2002). As evidenced by ancient human artifacts, it is clear that love, in one form or another, has always been on people's minds.
