### Notebook LCD Display Monitor Problem - ifitjams.com

The display resolution or display modes of a digital television, computer monitor or display device is the number of distinct pixels in each dimension that can be displayed. It can be an ambiguous term especially as the displayed resolution is controlled by different factors in cathode ray tube (CRT) displays, flat-panel displays (including liquid-crystal displays) and projection displays ...

Thanks for a VERY useful site, Carlton, which I have used several times since HD TV sets came out some years back. Just replaced a 5 year old 50" plasma set (that developed a horizontal line) with another 51" plasma set, 720p, (\$399), same brand (it was easy to put all the connections in the same places and not have to use a different remote).

and also takes into account the nonlinear dependence of the luminance on the RGB values; the monitor should have a reasonable gamma response. Of course, if  $\tau_2 = \tau_1$ , then the images will not flicker despite a possibly long response time. However, with the gray levels where the response time matters, there is typically a big difference between the dark-light and light-dark transitions, so ...
