In primates (including humans), one convenient way to study information-seeking is the k-arm bandit task (Gittins and Jones, 1974; Figure 2). In this task, decision-makers are faced with a series of choices between stochastic reward (Whittle, 1988). The optimal strategy requires adjudication between exploration (sampling to improve knowledge and, therefore, future choices) and exploitation ...

Almost always the first one is preferred over the second one. The first has the advantage that the implementation of the List can change (to a LinkedList for example), without affecting the rest of the code. This will be a difficult task to do with an ArrayList, not only because you will need to change ArrayList to LinkedList everywhere, but also because you may have used ArrayList specific ...
