Healthcare. Cross-sectional studies involve data collected at a defined time. They are often used to assess the prevalence of acute or chronic conditions, but cannot be used to answer questions about the causes of disease or the results of intervention. Cross-sectional data cannot be used to infer causality because temporality is not known.

### **Cross-sectional study - Wikipedia**

† This category includes questions about normal structure and function that may appear in the context of an abnormal clinical presentation. ‡ Approximately 10% to 15% of questions are not classified in the normal processes, abnormal processes, or principles of therapeutics categories.
