10. Does cell division happen during the entire cell cycle? What is interphase? Cell division normally occurs during the mitotic phase of the cell cycle. During interphase, processes that prepare for cell division take place, such as the duplication of DNA and centrioles. Interphase is the first phase and the mitotic phase is the second phase.

I know that during Prophase of Meiosis I, a pair of homologous chromosomes come together and begin the process of crossing over. I know that the first step of this process is the formation/arrival of protein strands that link the homologous pairs together, and that recombination enzymes (CRE Recombinase) then land on these strands and begin genetic recombination.
