"Big data" is a field that treats ways to analyze, systematically extract information from, or otherwise deal with data sets that are too large or complex to be dealt with by traditional data-processing application software. Data with many cases (rows) offer greater statistical power, while data with higher complexity (more attributes or columns) may lead to a higher false discovery rate.

Big data - Wikipedia

The history of Artificial Intelligence (AI) began in antiquity, with myths, stories and rumors of artificial beings endowed with intelligence or consciousness by master craftsmen. The seeds of modern AI were planted by classical philosophers who attempted to describe the process of human thinking as the mechanical manipulation of symbols [citation needed].

Decisions are the heart of success and at times there are critical moments when they can be difficult, perplexing and nerve racking. This side provides useful and practical guidance for making efficient and effective decisions in both public and private life.

Overcoming Serious Indecisiveness

Machine behaviour lies at the intersection of the fields that design and engineer AI systems and the fields that traditionally use scientific methods to study the behaviour of biological agents.
