This site serves as a resource site for students in Biology 1 & 1A. The goal of this course is to provide a general overview of major biological topics, provide opportunities for laboratory investigations, and expose students to current advances in biology and medicine.

### **Biology 1 & 1A**

Miller: No, I certainly don't think they do. I think the whole tradition of Western science is that science and religion are not mutually exclusive. There are many people in the scientific community, in the United States and around the world, who hold strong religious points of view and do not see their points of view conflicting with working in science or even with the philosophy of science.

The lac operon of the model bacterium *Escherichia coli* was the first operon to be discovered and provides a typical example of operon function. It consists of three adjacent structural genes, a promoter, a terminator, and an operator. The lac operon is regulated by several factors including the availability of glucose and lactose. It can be activated by allolactose.

### **Operon - Wikipedia**

Life is a characteristic that distinguishes physical entities that have biological processes, such as signaling and self-sustaining processes, from those that do not, either because such functions have ceased (they have died), or because they never had such functions and are classified as inanimate. Various forms of life exist, such as plants, animals, fungi, protists, archaea, and bacteria.
