How did they do it and what did they do? First some background to teach you the basics of developmental biology. An oocyte (pronounced "oh-oh-sight") is an unfertilized egg and it has no chance of developing into an animal unless it's fertilized. A recently fertilized egg is called a zygote (pronounced "zye-goat"). Funny how the last two letters in the alphabet describe the first stage of an ...

The cloning of Dolly, cell biology and developmental biology.

Spawn is the eggs and sperm released or deposited into water by aquatic animals. As a verb, to spawn refers to the process of releasing the eggs and sperm, and the act of both sexes is called spawning. Most aquatic animals, except for aquatic mammals and reptiles, reproduce through the process of spawning.. Spawn consists of the reproductive cells of many aquatic animals, some of which will ...
