A case starts at the trial court level, which could either be a trial by judge or trial by jury. Generally, evidence and witnesses are presented at the trial court level. An appellate court will hear appeals from parties seeking to change the result of the case heard at the trial court. An appellate court will not answer questions of fact, meaning they will not review the evidence in a case.

1. INTRODUCTION - A transistor is a small electronic device that can cause changes in a large electrical output signal by small changes in a small input signal. That is, a weak input signal can be amplified (made stronger) by a transistor. For example, very weak radio signals in the air can be picked up by a wire antenna and processed by transistor amplifiers until they are strong enough to be ...

A circuit breaker is an automatically operated electrical switch designed to protect an electrical circuit from damage caused by excess current from an overload or short circuit. Its basic function is to interrupt current flow after a fault is detected. Unlike a fuse, which operates once and then must be replaced, a circuit breaker can be reset (either manually or automatically) to resume ...
