Resume scanning from a position other than the beginning. If you resume a scan of the text, textscan reads from the beginning each time. To resume a scan from any other position, use the two-output argument syntax in your initial call to textscan.. For example, create a character vector

called lyric. Read the first word of the character vector, and then resume the scan.

Read formatted data from text file or string - MATLAB textscan

Lists. Wiki markup allows you to create bulleted or numbered lists, and is flexible enough to allow a combination of the two list types. If you need to separate the text within lists using line breaks, make sure you do so using a double slash (//).
