A mesocosm (meso-or 'medium' and -cosm 'world') is any outdoor experimental system that examines the natural environment under controlled conditions. In this way mesocosm studies provide a link between field surveys and highly controlled laboratory experiments. Mesocosms also tend to be medium-sized to large (e.g., aquatic mesocosm range: 1 to > 10,000 L) and contain multiple trophic levels of ...

The McCouch Lab investigates natural variation in the genus *Oryza*, focusing on how it evolved, how it is distributed in both domesticated and wild *Oryza* species, how it conditions complex phenotypes and how it can be efficiently utilized in rice improvement.. We have pioneered studies demonstrating that low-yielding wild and exotic *Oryza* species harbor genes and quantitative trait loci (QTL ...

This interactive simulation allows students to explore two classic mathematical models that describe how populations change over time: the exponential and logistic growth models. The exponential growth model describes how a population changes if its growth is unlimited. This model can be applied to ...

MOST gardeners are familiar with the vital role bees and other pollinators play in a healthy and productive garden. But their importance touches our lives every day. Did you know that one out of every three bites of your food depends on a pollinator? That's because about 150 crops grown in the U.S. depend on pollinators, including apples, almonds, blueberries, citrus, melons, pears, plums ...

In the 1990s, the Syngenta corporation funded Dr. Tyrone Hayes of UC Berkeley to study the environmental impacts of atrazine. When Dr. Hayes discovered ovaries growing in the testes of male frogs raised in atrazine-contaminated water, Syngenta refused to let him publish his findings. Hayes repeated the experiment with independent funding, and today continues research on atrazine's dramatic ...

Credits: 1. Prerequisite: Middle school biology and chemistry. Recommended: 9th or 10th Test Prep: CLEP Biology This course covers the basic material for this exam, but this is considered a very hard test, and I would suspect more will need to be studied to learn everything required for this huge exam. It's worth the same as two college courses which is why it covers so much.

An experiment is a procedure carried out to support, refute, or validate a hypothesis. Experiments provide insight into cause-and-effect by demonstrating what outcome occurs when a particular factor is manipulated. Experiments vary greatly in goal and scale, but always rely on repeatable procedure and logical analysis of the results.
