Facioscapulohumeral muscular dystrophy (FSHMD, FSHD or FSH)—originally named Landouzy-Dejerine—is a usually autosomal dominant inherited form of muscular dystrophy (MD) that initially affects the skeletal muscles of the face (facio), scapula (scapulo) and upper arms (). FSHD is the third most common genetic disease of skeletal muscle. Orpha.net lists the prevalence as 4/100,000 while a ...

Facioscapulohumeral muscular dystrophy - Wikipedia

Duchenne muscular dystrophy (DMD) is a severe type of muscular dystrophy. The symptom of muscle weakness usually begins around the age of four in boys and worsens quickly. Typically muscle loss occurs first in the thighs and pelvis followed by those of the arms. This can result in trouble standing up. Most are unable to walk by the age of 12. Affected muscles may look larger due to increased ...

3.2. Distribution. Caffeine is distributed throughout the body after being absorbed from the gastrointestinal tract (the small intestine in particular), entering all tissues via cell membranes (i.e., due to its lipophilic moiety or moieties and limited plasma protein binding) and entering intracellular tissue water [54,66,67]. It readily penetrates the blood-brain barrier as well [54,67].

The clinical toxicology of caffeine: A review and case study

x Postpartum haemorrhage (PPH) remains the leading cause of maternal morbidity and mortality worldwide. 1,2 In pregnancy there is a physiological shift towards hypercoagulation 3 despite

compensatory mechanisms of haemodilution and an increase in tissue factor-pathway inhibitor (TFPI) activity. 3 However, as placental blood flow at term constitutes 15 percent of the total cardiac output ...

Blood vessels are categorized by function. The composition of the wall varies quantitatively among these subcategories. Arteries conduct blood away from the heart and have proportionately more smooth muscle and elastic tissue than veins of comparable size.. Arteries are commonly sub-categorized into elastic arteries, muscular arteries, and arterioles.

Hair is an accessory organ of the skin made of columns of tightly packed dead keratinocytes found in most regions of the body. The few hairless parts of the body include the palmar surface of the hands, plantar surface of the feet, lips, labia minora, and glans penis. Hair helps to protect the body from UV radiation by preventing sunlight from striking the skin.
