Online Companion: Body Structures and Functions 10th edition

Loops. The most commonly used loop structures in R are for, while and apply loops. Less common are repeat loops. The break function is used to break out of loops, and next halts the processing of the current iteration and advances the looping index.. For Loop For loops are controlled by a looping vector. In every iteration of the loop one value in the looping vector is assigned to a variable ...

The cerebrum is a large part of the brain containing the cerebral cortex (of the two cerebral hemispheres), as well as several subcortical structures, including the hippocampus, basal ganglia, and olfactory bulb. In the human brain, the cerebrum is the uppermost region of the central nervous system. The prosencephalon is the embryonic structure from which the cerebrum develops prenatally.

In computing science and informatics, nesting [citation needed] is where information is organized in layers, or where objects contain other similar objects. It almost always refers to self-similar or recursive structures in some sense.. Nesting can mean: nested calls: using several levels of subroutines; recursive calls; nested levels of parentheses in arithmetic expressions

Liquid chromatography-tandem mass spectrometry (LC-MS/MS) was conducted to characterize the proteome of FAPS-enriched P-bodies. Comparing protein relative abundances between the sorted and pre-sorted fractions (), we identified 125 proteins as significantly enriched in P-bodies (Fisher exact test, $p < 0.025$) (Figure 2A). Among these, 15 were known P-body components.

What Is Vagal Nerve Neuropathy?. Its name comes from the Latin word for "wandering," and the vagal nerve, or vagus, is known as the rambler or the wanderer because of its extensive connections from the cranium to the rest of the body. With so many connections to different places, damage to or sickness of the vagal nerve can result in problems in one or several organs.
