Answer: The correct answers are - 1) A. fish. 2) A. Plant cells have cell walls containing cellulose, and animal cells lack a cell wall. Vertebrates are the backbone or spinal cord bearing animals.. There are five classes of vertebrates that are fishes, amphibians, reptiles, birds, and mammals.

Which of the following organisms is a vertebrate? A. fish ...

Biology is the natural science that studies life and living organisms, including their physical structure, chemical processes, molecular interactions, physiological mechanisms, development and evolution. Despite the complexity of the science, there are certain unifying concepts that consolidate it into a single, coherent field. Biology recognizes the cell as the basic unit of life, genes as ...

Biology - Wikipedia

Population Definition. A population is the number of organisms of the same species that live in a particular geographic area at the same time, with the capability of interbreeding.. For interbreeding to occur, individuals must be able to mate with any other member of a population and produce fertile offspring. However, populations contain genetic variation within themselves, and not all ...
