We adopted the construct items from published articles, with some minor changes to accommodate the social media context of our research. We measured the exogenous variable, tie strength with peers, using four items adapted from the validated scale proposed by De Bruyn and Lilien (2008). Identification with the peer group was measured with five items adapted from the scale for measuring ...

In mathematics, an analytic function is a function that is locally given by a convergent power series. There exist both real analytic functions and complex analytic functions, categories that are similar in some ways, but different in others. Functions of each type are infinitely differentiable, but complex analytic functions exhibit properties that do not hold generally for real analytic functions.

A complex number is a number that can be expressed in the form  $a + bi$ , where  $a$  and  $b$  are real numbers, and  $i$  is a solution of the equation  $x^2 = -1$ . Because no real number satisfies this equation,  $i$  is called an imaginary number. For the complex number  $a + bi$ ,  $a$  is called the real part, and  $b$  is called the imaginary part. Despite the historical nomenclature "imaginary", complex numbers are ...

Conformal Mapping. A conformal mapping, also called a conformal map, conformal transformation, angle-preserving transformation, or biholomorphic map, is a transformation that preserves local angles. An analytic function is conformal at any point where it has a nonzero derivative. Conversely, any conformal mapping of a complex variable which has continuous partial derivatives is analytic.

A Fourier series is an expansion of a periodic function  $f(x)$  in terms of an infinite sum of sines and cosines. Fourier series make use of the orthogonality relationships of the sine and cosine functions. The computation and study of Fourier series is known as harmonic analysis and is extremely useful as a way to break up an arbitrary periodic function into a set of simple terms that can be ...
