Business Internet, Voice, & Cloud: iTel Networks

Electronic data interchange (EDI) is the concept of businesses electronically communicating information that was traditionally communicated on paper, such as purchase orders and invoices. Technical standards for EDI exist to facilitate parties transacting such instruments without having to make special arrangements.. EDI has existed at least since the early 70s, and there are many EDI standards ...

A computer network is a digital telecommunications network which allows nodes to share resources. In computer networks, computing devices exchange data with each other using connections between nodes. These data links are established over cable media such as wires or optic cables, or wireless media such as Wi-Fi.. Network computer devices that originate, route and terminate the data are called ...

Enterprise Data Centers, Cloud and Networks - AiNET

Perhaps the most apparent transformation taking place with 5G is the move towards an entirely new region of the radio spectrum. While existing frequency bands below 6 GHz will still play an important role in next-generation networks, the adoption of centimeter and millimeter wave bands (3-30 GHz and 30-300 GHz, respectively) will be critical to the delivery of consistent, multi-Gbps throughputs.
