## Male Reproductive System Se 12

Cetaceans' reproductive organs are located inside the body. Male cetaceans (whales, dolphins, and porpoises) have two slits, the genital groove concealing the penis and one further behind for the anus. Cetaceans have fibroelastic penises, similar to those of Artiodactyla. The tapering tip of the cetacean penis is called the pars intrapraeputialis or terminal cone.

### Penis - Wikipedia

In mammals, all intact developmentally typical males have a penis, but the clitoris in the females of the following species is sufficiently enlarged that it is usually termed a pseudo-penis: spotted hyena, squirrel monkey, [citation needed] lemur, juvenile fossa and binturong. The enlarged clitoris in the fossa is supported by an os clitoridis, a bone similar to the os penis found in most mammals.
