In statistics, linear regression is a linear approach to modeling the relationship between a scalar response (or dependent variable) and one or more explanatory variables (or independent variables). The case of one explanatory variable is called simple linear regression. For more than one explanatory variable, the process is called multiple linear regression.

Figure 5. The figure above shows the graph of the function  $f$ , defined by for all numbers  $x$ . For which of the following functions  $g$ , defined for all numbers  $x$ , does the graph of  $g$  intersect the graph of  $f$ ? Explanation. You can see that all five choices are linear functions whose graphs are lines with various slopes and  $y$ -intercepts. The graph of Choice A is a line with slope 1 and  $y$ -intercept ...

The binomial distribution is a discrete probability distribution. It describes the outcome of  $n$  independent trials in an experiment. Each trial is assumed to have only two outcomes, either success or failure. If the probability of a successful trial is  $p$ , then the probability of having  $x$  successful outcomes in an experiment of  $n$  independent trials is as follows.
