Epithelia are a sheet of cells that line almost all body surfaces (skin, intestine, lung, body cavities), form the functional units of secretory glands, and line the inner surface of blood and lymphatic vessels.

Cell Biology - Yale University

Recent studies have revealed unexpected and surprising properties of the amyloid structure (). It has been shown that the beta sheet amyloid conformers self-assemble by a seeded nucleated growth mechanism characterized by an initial slow kinetic phase followed by a fast, thermodynamically favored phase in which peptide monomers/oligomers are added one by one to the growing end of the protofibril ().

Experiment: Measuring the Heat of Combustion of Food . This experiment can be used to measure the energy content of solid foods that can be easily cut up into small pieces of about 0.5 to 1 cm³. The food will need to be dried before use, eg, placed in a sealed dessicator with a suitable dessicant for a few days.

Heat of Combustion of Food Chemistry Tutorial

The Student's t-test is a statistical test that compares the mean and standard deviation of two samples to see if there is a significant difference between them. In an experiment, a t-test might be used to calculate whether or not differences seen between the control and each experimental group are a factor of the manipulated variable or simply the result of chance.
