The classification of stars is fundamental to stellar astronomy because it enables us to reduce a large sample of diverse individuals to a manageable number of groups with similar characteristics. Thus spectral classification is as basic to astronomy as the Linnean system of classifying plants and animals by genus and species is to biology.

The H-R diagram is a graph of star brightness versus star temperature. When many stars are plotted on an H-R diagram, it is found that they fall into groups. These groupings indicate star sizes and are clues to how the stars change during their lifetime. The measure of star brightness used in the H-R diagram is termed absolute magnitude.
