A gear or cogwheel is a rotating machine part having cut teeth, or in the case of a cogwheel, inserted teeth (called cogs), which mesh with another toothed part to transmit torque. Geared devices can change the speed, torque, and direction of a power source. Gears almost always produce a change in torque, creating a mechanical advantage, through their gear ratio, and thus may be considered a ...

we have a chefs model electric, 3 stone set was supposed to be able to sharpen serrated. Never could do that. But at first the unit was able to get a real good edge on a variety of non serrated edges....then it turned to crap and actually ruined 2 knives that cost more then the unit each....it didnt last long enough . would of been less expensive to pay some one to sharpen the knives it ...
