Hypothetical types of biochemistry are forms of biochemistry speculated to be scientifically viable but not proven to exist at this time. The kinds of living organisms currently known on Earth all use carbon compounds for basic structural and metabolic functions, water as a solvent, and DNA or RNA to define and control their form. If life exists on other planets or moons, it may be chemically ...

Hypothetical types of biochemistry - Wikipedia

An introductory biology course designed through cross-institutional collaboration. This course teaches learners how to use biology to answer the question "How do we find life in the universe?"
