Lab 9: In this lab students get a practical application of identifying an unknown microbe by running a series of diagnostic tests. Identification of the unknown microbe is based on the recorded

BIOD 171 Essential Microbiology w/ Lab 4 credits

R f values are calculated by looking at the distance each component travels on the chromatography paper compared to the distance traveled by the solvent front. This ratio will be different for each component due to its unique chemical properties. When measuring the distance the component traveled, you should measure from the origin (where the middle of the spot originally was) and then to the ...
