Have you managed to convert WGS-84 longitude and latitude into Cartesian coordinates ?. I also have elevation. I have tried the accepted answer here, but it doesn't give me the right answer.

Converting from longitude\\latitude to Cartesian coordinates

When looking at a map, latitude lines run horizontally. Latitude lines are also known as parallels since they are parallel and are an equal distant from each other. Each degree of latitude is approximately 69 miles (111 km) apart; there is a variation due to the fact that the earth is not a perfect sphere but an oblate ellipsoid (slightly egg-shaped).

What Are Latitude and Longitude Lines on Maps? - ThoughtCo

How do I calculate the distance between two points specified by latitude and longitude? For clarification, I'd like the distance in kilometers; the points use the WGS84 system and I'd like to understand the relative accuracies of the approaches available.

Calculate distance between two latitude-longitude points ...

Latitude and Longitude Finder on Map Get Coordinates

@user84263 - in a Euclidean geometry, axes are at right angles, and lines that are constant in one coordinate are all at right angles to lines of the other coordinate. On a non-Euclidean surface, as you point out, this cannot be the case. Nevertheless, a spherical or ellipsoidal surface can be defined by two coordinates, call them x/y or longitude/latitude as you wish.
