Those large white blobs (termed "lipid droplets") in the white fat cells are what house our triglycerides (TAGs...get used to this acronym, I'm going to use it a lot).The lipid droplets are what grow and shrink as TAGs come and go.

### **The Science Behind Fat Metabolism - KetoSchool**

Abiogenesis, or informally the origin of life, is the natural process by which life has arisen from non-living matter, such as simple organic compounds. While the details of this process are still unknown, the prevailing scientific hypothesis is that the transition from non-living to living entities was not a single event, but a gradual process of increasing complexity that involved molecular ...

Ethyl oleate Short-chain. Short-chain fatty acids are the primary end products of bacterial metabolism in the human large intestine. Moreover, while short-chain fatty acids are formed from various precursors by anaerobic micro-organisms, carbohydrates are the most common progenitors of short-chain fatty acids.

The vast range of maximum lifespan differences between species provides convincing evidence that longevity is genetically influenced. An elephant lives about 10–20 times longer than a mouse, yet both animals have roughly the same number of lifetime heartbeats — the elephant at 30 per minute and the mouse at 300 per minute.
