The Boveri-Sutton chromosome theory (also known as the chromosome theory of inheritance or the Sutton-Boveri theory) is a fundamental unifying theory of genetics which identifies chromosomes as the carriers of genetic material. It correctly explains the mechanism underlying the laws of Mendelian inheritance by identifying chromosomes with the paired factors (particles) required by Mendel's ...

Descubrimiento del ligamiento. Tras los estudios de genética clásica sobre la transmisión de caracteres independientes por parte de Mendel que condujeron en el siglo XIX a la formulación de sus leyes, [2] otros investigadores, William Bateson y R. C. Punnett, encontraron en 1911 una desviación a este tipo de herencia al estudiar la segregación de cruzamientos entre dos líneas de flores ...

De manier waarop organismen eigenschappen doorgeven aan hun nakomelingen werd ontdekt door de 19e-eeuwse botanicus en monnik Gregor Mendel, door middel van experimenten met erwtenplanten. De principes van erfelijkheid worden daarom wel de Wetten van Mendel genoemd. Organismen geven eigenschappen door aan hun nageslacht in discrete eenheden, die genen genoemd worden.
