In the male reproductive system, the prostate gland bulbourethral glands seminal vesicles testes secrete(s) a fluid that neutralizes acidic conditions in the vagina. in the female reproductive system, the cervix fallopian tubes bulbourethral glands prostate glands secrete(s) mucus that lubricates the vagina

In the male reproductive system, the prostate gland ...

Male canines are the only animals that have a locking bulbus glandis or "bulb", a spherical area of erectile tissue at the base of the penis. [citation needed] During copulation, and only after the male's penis is fully inside the female's vagina, the bulbus glandis becomes engorged with blood. In coyotes, when the female's vagina subsequently contracts, the penis becomes locked inside the female.

What is PCOS? | girlshealth.gov

The penis is the most visible part of the male sexual anatomy. It is made up of two parts, the shaft and the glans (also called the head). The shaft houses the corpora cavernosa (two flexible cylinders comprised of erectile tissue that run the length of the penis and support erections), and the corpus spongiosum (erectile tissue surrounding the urethra).
