Geology of NM State Parks - New Mexico Institute of Mining ...

An earthquake (also known as a quake, tremor or temblor) is the shaking of the surface of the Earth, resulting from the sudden release of energy in the Earth's lithosphere that creates seismic waves. Earthquakes can range in size from those that are so weak that they cannot be felt to those violent enough to toss people around and destroy whole cities.

Earthquake - Wikipedia

The Physical Setting: Earth Science, is related to the field of science called Earth Science. In this course you will be studying the different processes, relationships, mechanisms, and concepts that help us interpret our planet Earth.

Mr. Leigh-Manuell's Earth Science Class

Watch P & S waves Moving Through the Earth's Interior-This animation comes from the same site as the animation above, but this shows these same waves as they travel through the interior of the Earth.. Changing the Thickness of a Layer-This animation allows you to compare the paths that P and S waves would take in models of the Earth with liquid cores of different sizes.
