Elementary Differential Equations and Boundary Value Problems 11e, like its predecessors, is written from the viewpoint of the applied mathematician, whose interest in differential equations may sometimes be quite theoretical, sometimes intensely practical, and often somewhere in between. The authors have sought to combine a sound and accurate (but not abstract) exposition of the elementary ...

Sturm–Liouville theory is a theory of a special type of second order linear ordinary differential equation. Their solutions are based on eigenvalues and corresponding eigenfunctions of linear operators defined via second-order homogeneous linear equations. The problems are identified as Sturm–Liouville Problems (SLP) and are named after J.C.F. Sturm and J. Liouville, who studied them in the ...

A partial differential equation (PDE) is a differential equation that contains unknown multivariable functions and their partial derivatives. (This is in contrast to ordinary differential equations, which deal with functions of a single variable and their derivatives.) PDEs are used to formulate problems involving functions of several variables, and are either solved in closed form, or used to ...

There are a number of equations known as the Riccati differential equation. The most common is  $z^2 w'' + [z^2 - n(n+1)]w = 0$  (1) (Abramowitz and Stegun 1972, p. 445; Zwillinger 1997, p. 126), which has solutions  $w = A z_j(z) + B z_{j+1}(z)$ , (2) where  $j_n(z)$  and  $y_n(z)$  are spherical Bessel functions of the first and second kinds. Another Riccati differential equation is  $(dy)/(dz) = az^n + by^2$ , (3) which is ...

8. Mechanics of Elastic Solids . In this chapter, we apply the general equations of continuum mechanics to elastic solids.. As a philosophical preamble, it is interesting to contrast the challenges associated with modeling solids to the fluid mechanics problems discussed in the preceding chapter.

The lack of research to develop further a theory of evaluation is a glaring shortcoming for human resource development (HRD). In this paper, I argue that the four-level system of training evaluation is really a taxonomy of outcomes and is flawed as an evaluation model Research is needed to develop a fully specified and researchable evaluation model.
