After yesterday's post about what determines temperature, I thought I would revisit one of the most convincing evidences of Earth's greenhouse effect.. As I've mentioned before, a handheld infrared thermometer is a great little tool to help gain physical insight into the thermal radiative (infrared) effect the atmosphere has on surface temperature.

Temperature scales differ in two ways: the point chosen as zero degrees, and the magnitudes of incremental units or degrees on the scale. The Celsius scale (°C) is used for common temperature measurements in most of the world. It is an empirical scale that was developed by a historical progress, which led to its zero point 0 °C being defined by the freezing point of water, and additional ...

The electron is a subatomic particle, symbol  $e^-$  or  $\beta^-$ , whose electric charge is negative one elementary charge. Electrons belong to the first generation of the lepton particle family, and are generally thought to be elementary particles because they have no known components or substructure. The electron has a mass that is approximately 1/1836 that of the proton.

Changes in Probabilities. The shape of the Maxwell-Boltzmann distribution can change depending on a couple of factors. First, the average speed of the gas molecules is affected by temperature.

That confused me for a while too despite my undergraduate physics degree. The trick is realizing it's not a "chain of CO<sub>2</sub> molecules". When a CO<sub>2</sub> molecule absorbs an infrared photon and starts vibrating it usually crashes into other air molecules which diffuses the energy.

Yet we begin to see the limitations of each system. Point defense systems, railguns, coilguns, conventional guns, or even lasers, are power limited in this exchange.

For those on who post on this blog and continue to claim that the Greenhouse Effect violates the 2nd Law of Thermodynamics, such as Gordon Robertson and Mike Flynn, I have performed a new demonstration to show that "back radiation" from a colder body can result in an increase in the temperature of a hotter body.
