A typical virus is composed of a core of DNA or RNA surrounded by a protein coat called a capsid. Viruses that infect bacteria are called bacteriophages. They enter living cells and, once inside, use the machinery of the infected cell to produce more viruses. Viral Infections Viruses have two methods of infection once inside a host cell.

Viruses have characteristic shapes. Certain viruses have the shape of an icosahedron, a 20-sided figure made up of equilateral triangles. Other viruses have the shape of a helix, a coil-like structure. The viruses that cause herpes simplex, infectious mononucleosis, and chickenpox are icosahedral (solid with 20 faces).
