The strange back-and forth motions of the planets in the sky were impossible to predict until Kepler figured out the true shapes of the planetary orbits around the sun. Orbits were always believed to be circular, but Kepler used mathematics to discover they were actually elliptical. An ellipse is an oval that is characterized by two quantities.

LAB: EXPLORING ORBITS Answer Sheet

Explain why the Earth orbits the Sun (you must use both the terms gravity and inertia in your answer). Earth is an object in motion so according to Newton the Earth would keep travelling forward forever until it runs into another object or is disturbed by an unbalanced force.

Orbital Motion - Kepler's Laws. Learn Kepler's three laws of planetary motion by examining the orbit of a planet around a star. The initial position, velocity, and mass of the planet can be varied as well as the mass of the star. The foci and centers of orbits can be displayed and compared to the location of the star.
