Cetaceans' reproductive organs are located inside the body. Male cetaceans (whales, dolphins, and porpoises) have two slits, the genital groove concealing the penis and one further behind for the anus. Cetaceans have fibroelastic penises, similar to those of Artiodactyla. The tapering tip of the cetacean penis is called the pars intrapraeputialis or terminal cone.

The XY sex-determination system is the sex-determination system found in humans, most other mammals, some insects (), some snakes, and some plants (). In this system, the sex of an individual is determined by a pair of sex chromosomes. Females typically have two of the same kind of sex chromosome (XX), and are called the homogametic sex. Males typically have two different kinds of sex ...

Longevity FAQ: A beginner's guide to longevity research Hi! I'm Laura Deming, and I run Longevity Fund. I spend a lot of time thinking about what could increase healthy human lifespan.

## Longevity FAQ — Laura Deming

Mechanisms of mate choice evolution. --- Several mechanisms have been put forward to explain mate choice: (i) Direct phenotypic effects. Female preference for a male ornament can evolve as a result of direct phenotypic benefits if the ornament reflects the ability of the male to provide material advantages, such as a high-quality territory, nutrition, parental care or protection.

While hiking at Tar Hollow this past weekend, we spotted a Luna moth perched on a burnt tree trunk. After studying its photo I realized that we now had photos of both the male and female Luna moth, so I thought I would share with you how to tell the difference between the two genders, plus provide a little background information on this moth.
